

Dealing with grease interceptors has been a fact of life for restaurant owners. But new, patented innovations from GreenTek and Hydrologix are making this process worry-free and easy.

Pumping your grease interceptor presents numerous problems:

- Environmentally harmful
- Annoying sewer odors
- Costly and messy to pump
- High-maintenance

Benefits of the Hydrologix System from GreenTek:

- Eco-friendly
- Healthy for you and your guests
- Aesthetic, with no odors
- Low-maintenance

Before GreenTek

With GreenTek

GreenTek saves you money while greening your business and simplifying your grease interceptor maintenance.

GreenTek

Greening your restaurant's waste stream while saving you time and money.

What is the Hydrologix System from GreenTek?

It's a device that keeps your interceptor clean and maintenance-free using a patented biological process. Unlike your existing system, it requires minimal maintenance, is clean and sanitary, and contributes to a healthier environment. **Avoid fines, odor, and overflow, and nearly eliminate the need for pumping out your system, while saving money over time, with Hydrologix.**

Local and federal regulations mandate various actions to prevent fats, oils and grease ("FOG") from making their way into municipal wastewater. Discharges of these materials can cause blockages and sewage spills threatening wildlife and public health. So proper disposal of these wastes via grease interceptors is vital. Until now, grease interceptors were a constant problem. Foul odors from hydrogen sulfide gas coming from the waste; noisy and disruptive pumping trucks; and the need to dump grease into a landfill are among the many problems which are solved by installing the Hydrologix System by GreenTek.

How It Works

- A patented microbial process cleans your FOG materials
- FOG becomes treated water safe to discharge directly into the sewer system
- Proprietary, food-grade microbes, similar to those used to clean up toxic waste or oil spills
- Managed by an on-site computer
- Cameras and electronic sensors continuously collect data
- Can be monitored remotely by maintenance staff

Don't lose business by having a foul-smelling, noisy pumping truck out front every month. With the GreenTek system, pumping is reduced or nearly eliminated, for a much more pleasant, enjoyable, and profitable experience.

"The Hydrologix GRS at Montage Laguna Beach has exceeded our expectations for a grease waste management solution and supports our company vision of creating a more sustainable environment both for our guests and the community."

*-Bill Claypool, VP of Development Services
Montage Hotels & Resorts*

Did You Know?

Right now, grease pumped from your restaurant ends up here, in a landfill. Don't just move the problem somewhere else, solve it at the source. The EPA is already considering regulations to mandate local disposal of grease. Don't wait — help the planet and your business by going "green" now.

The GreenTek Advantage is Clear

**GREEN TEK WITH
HYDROLOGIX GRS
SERVICE**

**PUMPING &
HAULING
SERVICE**

Lowers Your Costs	<p>YES: Lower monthly fees</p> <p>NO: Fees reflect rising costs of labor, fuel & disposal</p>
Odor Control	<p>YES: Continuous</p> <p>NO</p>
Remote 24x7 Monitoring	<p>YES: Continuous</p> <p>NO</p>
Green Technology & LEED*	<p>YES: Tested and proven "disposal" is taken care of on site</p> <p>NO: Problem of disposal is not resolved, grease is dumped in landfills</p>
Periodic Pumping Reduced	<p>YES: Virtually eliminated if best management practices are maintained</p> <p>NO: Frequent pumping is required</p>
Minimal Facility Space Used	<p>YES: Small storage cabinet, approx. 5 cubic feet</p> <p>NO: Pumping trucks must be allowed access to grease interceptor in view of customers</p>
Customer Friendly	<p>YES: Quite, aesthetically pleasing and easy for staff</p> <p>NO: Noisy trucks and bad odors</p>
Peace of Mind	<p>YES: Warning alerts sent if levels get high</p> <p>NO: Spills are only apparent after it is too late to prevent</p>
